

Now Available At Totem Rentals

Helical piers, also known as anchors, piles or screw piles, are deep foundation solutions used to secure new or repair existing foundations. Due to their design and ease to install, they are most commonly used whenever soil conditions prevent standard foundation solutions. Instead of requiring large excavation work, they thread into the ground. This minimizes installation time, requires little soil disturbance, and most importantly transfers the weight of the structure to load bearing soil.

The PierTech Mini Skid Steer Attachment allows machines like the dingo or any mini excavator to install helical piles. This attachment and drive can put the 2 7/8" pile in to capacity. Great for low clearance and tight access installs, keeping the installer from having to use the handheld. On some machines the full setup can fit through a standard doorway.

Square Shaft Anchors & Round Shaft Piers
